THE ADVENT OF “Dendoman”

Nakayama has chosen and developed a new type of crawler-mounted crusher and screen with the electric-driven crushing mechanism and hydraulic travelling and release system to minimise the overall life-cycle costs of the machine including fuel and running costs as well as initial purchase cost.

This “**Dendoman**” gives higher energy efficiency, easier maintenance and troubleshooting with electric system.

DENDO-means “Electric-powered” in Japanese, and “**Dendoman**” is the name of Nakayama electric-driven crawler-mounted equipment.
